

Swift, mobile and responsive

QRemote Control brings unlimited benefits to those companies who value the ability to access data, run commands and programs directly from their mobile phone as well as answering and replying to messages sent from the IBM System i. Users benefit from the ability to access information and control multiple System i's without the restrictions that come with on-site management.

- A pre-requisite of QRemote Control is the installation of QMessage Monitor.
- Reply to messages from your mobile phone and receive confirmation back when a message has been answered.
- Run commands and programs from your mobile phone.
- Keep check on the status of your message escalation.
- Graphical PC front end to easily track SMS messages being sent and answered from mobile phones.
- Grouping facility to send urgent or universal messages to a large number of users, at the same time, regardless of their whereabouts.
- Authorisation list protocol via QMessage Monitor offers additional security, ensuring each individual has a specified level of authorisation to view and respond to particular messages sent to their mobile phones.
- Additional system information can be accessed via mobile phone for more extensive problem evaluation to help the user determine the best response.
- Load balancing between servers is automatic.
- Spooled print files can be sent to email addresses.
- In built SMTP client supports any email server that supports the Internet standard.
- Comply with your audit regulations through QMessage Monitor's message and reply logs.
